

Dear Hiring Manager,

I am writing to express my interest in the Backend Developer position. I am a Backend Engineer with 3.5+ year of hands-on experience in designing and developing scalable backend systems using **Django** and **FastAPI**, with a strong focus on building secure, high-performance RESTful APIs for real-world applications.

I have solid experience working with **PostgreSQL**, including schema design, complex query optimization, indexing strategies, and ensuring efficient data modeling for production-grade systems. I am also familiar with building modular and maintainable backend architectures that support growth and scalability.

Alongside traditional backend development, I have practical experience in **Generative AI and LLM-based systems**, including **RAG (Retrieval-Augmented Generation) pipelines**, prompt engineering, and integrating LLM APIs into backend services. I have worked on projects involving document processing workflows, AI-powered APIs, and intelligent backend features that combine structured data with LLM capabilities to deliver smarter applications.

I enjoy working at the intersection of **backend engineering and AI systems**, where I can build production-ready, scalable solutions that go beyond conventional APIs. I am particularly interested in roles where I can contribute to AI-driven backend services, microservices architecture, and cloud-ready systems.

I am a fast learner, highly motivated, and committed to continuous improvement. I would welcome the opportunity to contribute my backend and AI engineering experience to your team and help build impactful, scalable products.

Sincerely,
Syed Jawad Ali
